

logger::ConsoleLogger::log

logger::FileLogger::log

logger::ALogger::getLogPrefix

```
graph LR; A[logger::ConsoleLogger::log] --> C[logger::ALogger::getLogPrefix]; B[logger::FileLogger::log] --> C;
```

The diagram illustrates a relationship between three logging methods. On the left, two white rectangular boxes are stacked vertically. The top box contains the text 'logger::ConsoleLogger::log' and the bottom box contains 'logger::FileLogger::log'. On the right, a gray rectangular box contains the text 'logger::ALogger::getLogPrefix'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both 'ConsoleLogger::log' and 'FileLogger::log' utilize or inherit from the 'ALogger::getLogPrefix' method.
